

AOIT²

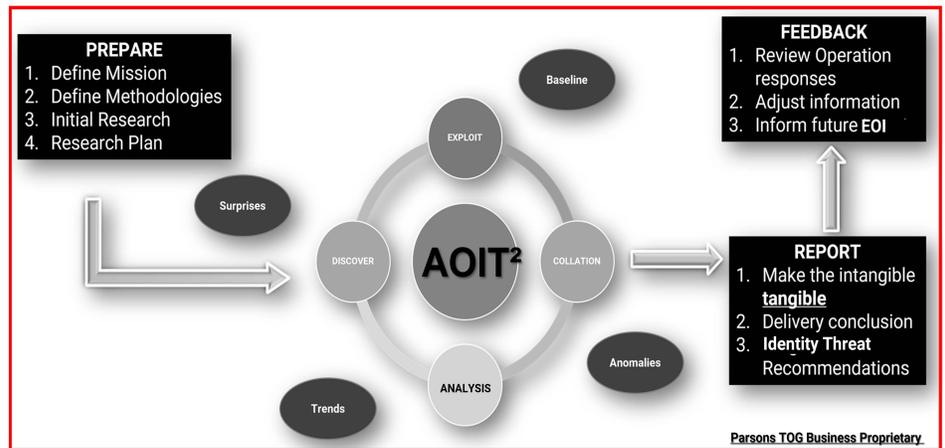

Advanced Open-Source Identity Threat Tradecraft

Course Overview

The Advanced Open-Source Identity Threat Tradecraft Course (AOIT²) is a comprehensive program developed by Parsons Technical Operations Group to support USGOV operations. This course provides a practical approach to leveraging Publicly Available Information (PAI) to gather and disseminate information in order to address specific mission requirements.

AOIT² employs a meticulous approach within the PAI research process to identify Identities Threats that pose a direct threat to mission success.

AOIT² assists researchers in identifying specific countermeasures against threats to a mission based on the capabilities, policies, regulations, and Rules of Engagement established within an Area of Operation.

Certification

AOIT² instructors are selected for their proven ability to combine Demonstrated expertise derived from practical, real-world experience. Our program utilizes hands-on instruction and curated practical scenarios to ensure students master the content and apply it to multiple course deliverables. Upon meeting all requirements, students will receive a certificate recognizing their proficiency in the Identity Threat, PAI & Open Source Intelligence (OSINT) research skills and methodology acquired during the course.

What are the distinctive features that set AOIT² apart from other courses?

- AOIT² methodologies are based on a comprehensive scheme approach utilizes both PAI and OSINT.
- AOIT² is a comprehensive solution that can be used to feed, support, and validate OSINT data.
- It is important to note that AOIT² is applicable to any supporting or operational PAI environment
- AOIT² is committed to supporting both Linear and Multi-Directional Operational research approaches. The goal of this support is to enhance relationships between support and operational requirements.

AOIT² APPROACH

Differentiators

- Our curriculum is based on the best-in-class models, and has been shown to result in positive mission outcomes.
- AOIT² instructors boast a combined total of over 300 years of targeting experience and real-world, lessons-learned scenarios.
- We provide customized training that is comprehensive, skills-based, and tool-agnostic to meet your specific requirements.
- Information is provided in real time and is relevant to the present moment.

Mission and Skills Supported

- Targeting & Threat Intelligence
- Information Warfare
- PAI approaches to support Multi-Domain Operations
- OSINT
- Multi Domain Operations (MDO)
- Civil Affairs
- Geopolitical Strategies
- F3EA
- C4
- Force Protection
- HUMINT
- Identity Management
- Information Operations
- Logistics
- Operational Security
- Preparation of the Digital Environment
- Psychological Operations
- Public Affairs
- Commercial Analysis
- Data Breaches
- Fraud Detection
- And more

Skills & Outcomes

- Understanding the capabilities of PAI research in support of the Identity Threat Research Process.
- Identify Entities of Interest (EOI) to include both tangible and intangible targets.
- Comprehension of the AOIT² Framework including:
 - Preparation
 - Discovery
 - Exploitation
 - Collation
 - Analysis
 - Reporting
 - Feedback
- Understanding of the methodologies, assessments and research necessary to create an Identity Threat Report (ITR)

Value	C	A	R	V	E	R
5	Loss would be mission stopper	Easily accessible. No effective security	Extremely difficult to replace. Long down time	A dedicated adversary has the capability and expertise to attack	Very high sociological, economical, political impact; considerable loss of lives and/or injured	Easily recognized by all with no confusion
4	Loss would reduce mission performance considerably	Accessible	Difficult to replace with long down time	A dedicated adversary has the capability and expertise to attack	High impact; some loss of lives or injuries	Easily recognized by most
3	Loss would reduce mission performance	Somewhat accessible	Difficult to replace in a short time	A dedicated adversary may have the capability to attack	Moderate impact; some adverse impact on persons	Recognized with some training
2	Loss may reduce mission performance	Difficult to gain access	Difficult to replace in a short time	A dedicated adversary may have the capability to attack	Little impact; no adverse impact on persons	Hard to recognize. Confusion probable
1	Loss would not affect mission performance	Very difficult to gain access	Replacement parts are readily available or asset redundancy	A dedicated adversary does not have the capability and expertise to attack	No unfavourable impact	Extremely difficult to recognize without assistance

Delivery

AOIT² is an in-person course offered to USGOV customers at one of our state-of-the-art classrooms in Herndon, VA, or Fayetteville, NC.

- Mobile training teams are available to host specially-tailored courses upon request, including outside the United State.

AOIT² is a ten-day course designed to equip participants with the essential skills to conduct Identity Threat research in an open-source environment.

A five-day course is available for prior CASO graduates. To be eligible for the expedited AOIT² course, candidates must earn CASO certification within one year of the course start date. Certification must demonstrate proficiency in open-source research or the daily use of these techniques.
